

Parking lot monitoring

Embedded Automation & Cloud Application

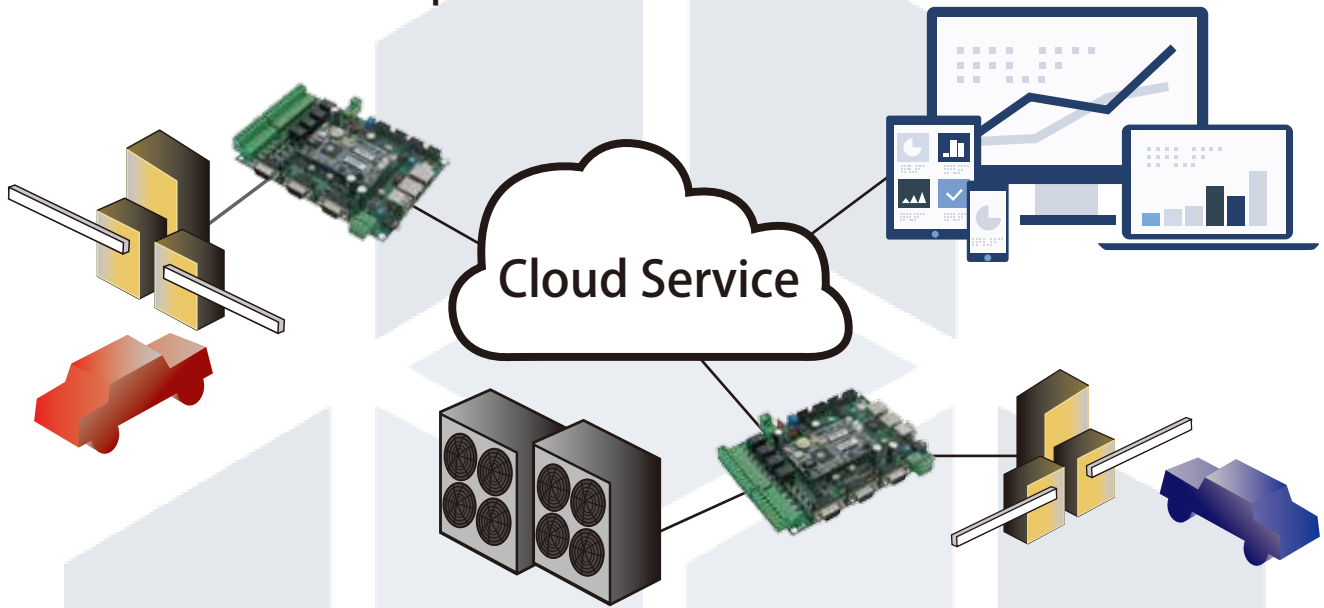

● Overview

In the crowded city, motorists will inevitably encounter a difficult situation; when there are so many parking lots, but people can not grasp the actual situation of each parking lot, and spend a lot of time looking for them. How to let the public and the operator grasp the instant information of each car park immediately, become an important issue of parking lot management to be faced.

● Architecture

Adoption : EBox-AIO Series

Transfer the remaining parking spaces to the cloud, providing real-time parking information to the public, and provide environmental information to the manager, in order to really grasp the actual situation of each parking lot.
